

Hydrogen With its Fundamental Treat of Surfaces

If we treat hydrogen to have identities. These identities function as an abrupt form of functions to conclude different surfaces of different abrupt informational consequences.

One having each of their properties, having different informational breakthroughs. The surfaces of Hydrogen then can be suggested to emerge from sustainable informational grounds of varied dimensional and geometric surfaces. One which defines it to have an identity far superior or inferior against or provided for another. But in all allotted differences, information nonetheless, providing means for the information breakthrough of interaction, activity, and, reality generation. Thus, Hydrogen, isn't just a quantifiable event or a quantum activity of a singular identity. It is, and has, information sustainable grounds for acquisition and manifestation of energy. Base in positions, surfaces they produce, and geometric needs to produce information sustainable grounds of achievements and manifestation of reality.

$$\sum_i^n H_i \Delta S_i \text{ or } \sum_i^n \left[H_i \left[\sum_l^m \Delta S_l \right] \right]$$

This has two meanings, base from these summation of Hydrogen of their informational Grounds for surfaces. We have in its existence, the manifestation of informational convergence of bodies of information structures of Hydrogen upon many implications and satisfactory grounds for inclination for the sustainable manifestation of an object in an event that this source code has manifested form. Into activity, this form will create formation benefiting that world and its reality for grounds of manipulation or leading a good life. Biosymmetry or Geometric surfaces inclining for the benefit of such structure exists and the persona or personality created is a manifestation that subsides the integrity that will genetically manifest the structure of the universe, or the reality thereof.
